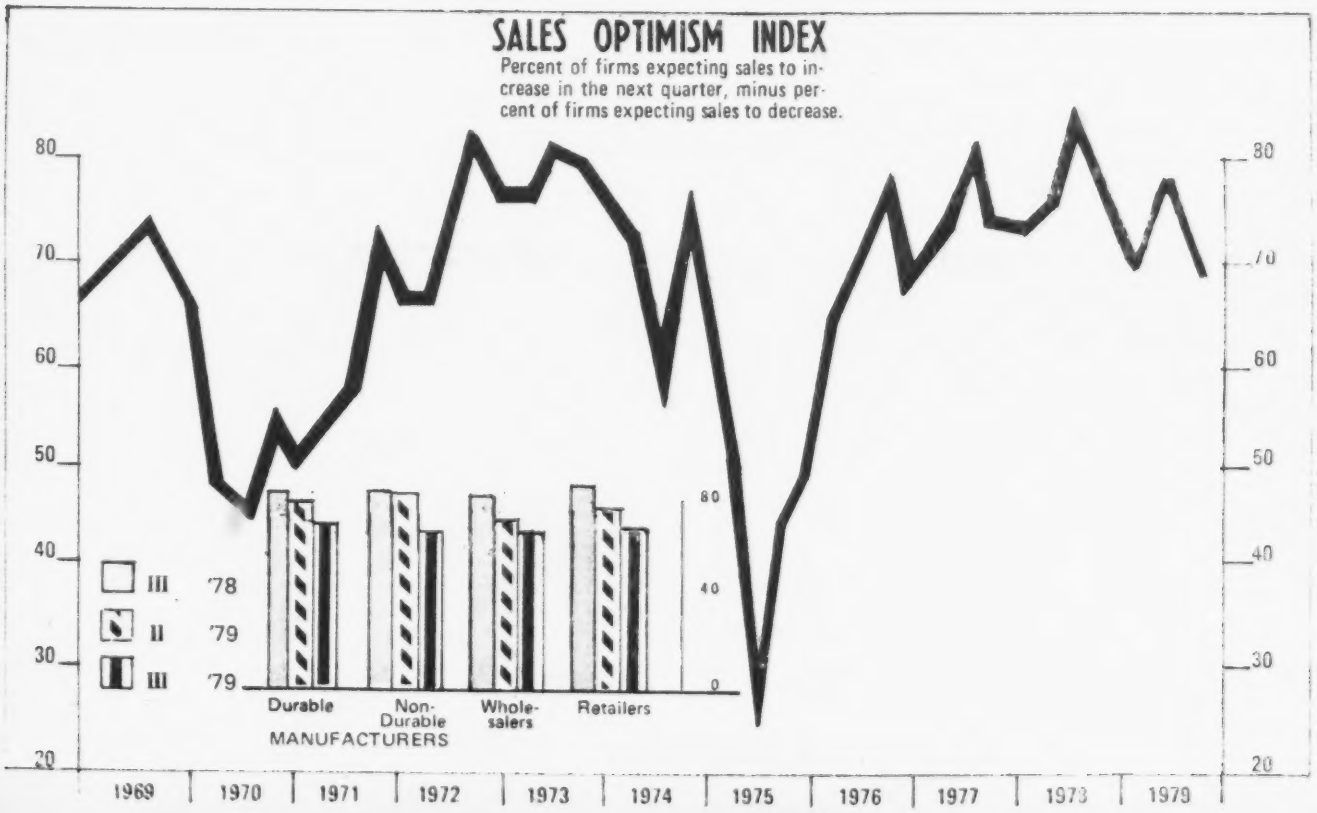
BUSINESS OPTIMISM FOR THIRD QUARTER SAGS MODERATELY IN DUN & BRADSTREET'S SURVEY OF EXPECTATIONS

NEW YORK, July 19--Business optimism showed signs of wilting but still remained far above recession levels in the latest Dun & Bradstreet Survey of Businessmen's Expectations. Among the 1,467 executives interviewed about third quarter prospects for their businesses, confidence dimmed in regard to sales and new orders, erasing the rebound which occurred in the previous quarter. In puzzling contrast, their outlook on profits and employment changed only slightly.

The Sales Optimism Index--the percentage of executives expecting increases minus the percentage expecting decreases--dropped to 69 from 77 in the preceding survey. While this was the lowest reading since the first quarter of 1977, it retained a healthy amount of cheer when compared with the 46 registered in the similar quarter of '75.



By far the steepest decline in sales optimism took place among non-durable goods manufacturers whose index was down to 68 from 82, a remarkable turn-around since this group had been most sanguine a quarter earlier. Wholesalers showed the least change, a dip of five points.

Two out of three of the manufacturing leaders polled looked for an increase in new orders in the third quarter, fewer than in the second quarter when nearly three out of four anticipated a growth in bookings.

Contrary to the lessening confidence about sales and orders, the Profits Optimism Index shifted only slightly, easing to 61 from 64. This ebb in cheer about the bottom line centered among retailers and wholesalers whereas manufacturers held firm on their earnings predictions.

The upturn in expectations of inventory growth noted in the previous survey was short-lived. In the latest poll, 53 per cent anticipated an increase in stocks, the second smallest portion in six quarters. Actually, manufacturers, particularly those in non-durable goods industries, accounted for this decline. Across the board, some 10 to 11 per cent forecast a cutback in stocks. This was less than one-half the 29 per cent expecting curtailed inventories during the recession in '75.

For three straight quarters, predictions on employee rosters have varied little. Additions to payrolls were anticipated by 22 per cent of the executives questioned as against 24 per cent in both the second and first quarters of 1979. But, there was a closer consensus among manufacturers, wholesalers and retailers than in the preceding round of interviews. Durable goods makers, generally by far the most optimistic about adding employees, reduced their sights considerably, with 26 per cent projecting increases vs. 35 per cent in the second quarter survey.

Higher price tags were expected by 82 per cent of the business leaders, up an edge from 81 per cent a quarter earlier and the most since the end of 1974. Most frequently anticipating a further hike were wholesalers and retailers.

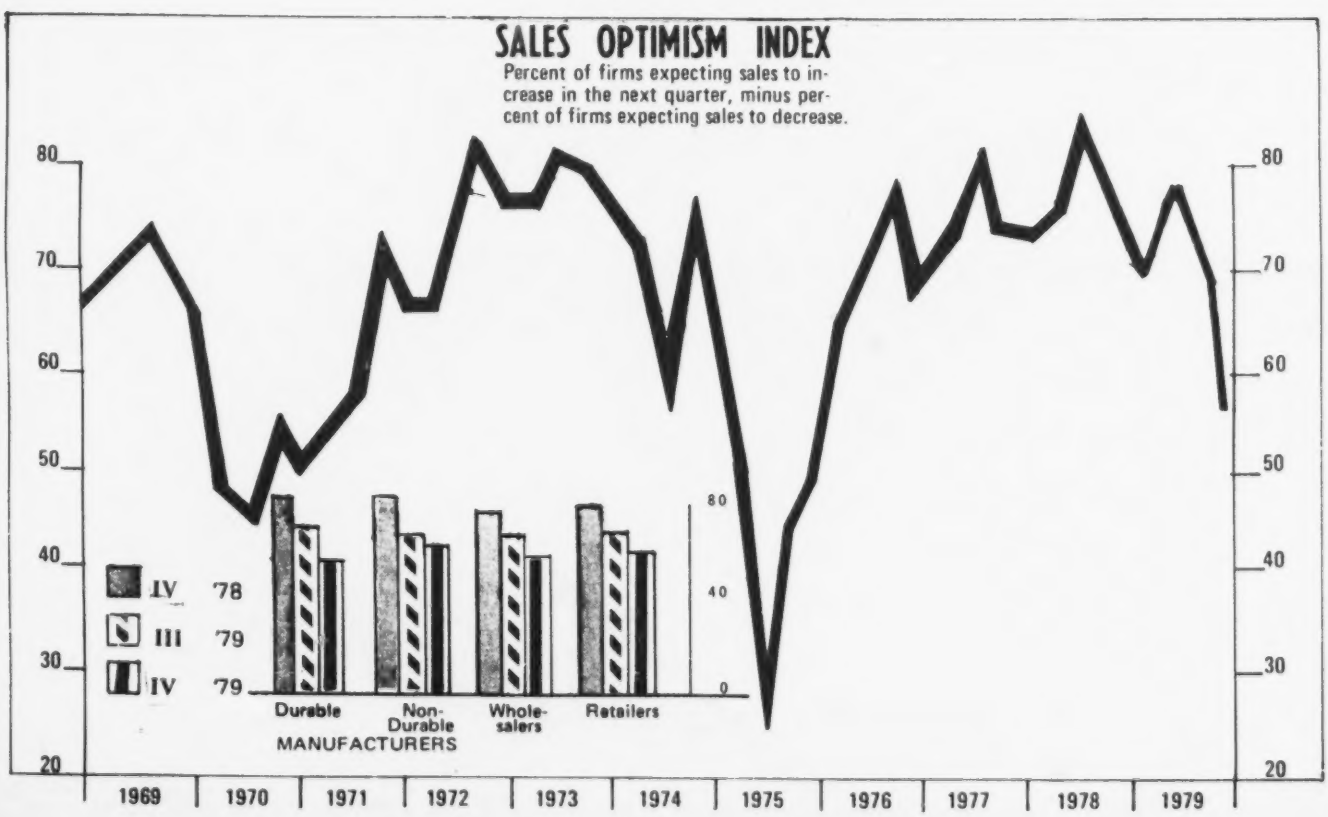
BUSINESS OPTIMISM DROPS TO FOUR-YEAR LOW IN LATEST DUN & BRADSTREET SURVEY

NEW YORK, October 18--Business confidence about sales and profits prospects took the steepest drop in four years in Dun & Bradstreet's latest Survey of Business Expectations. However, among the 1,483 executives interviewed about their outlook for the fourth quarter of 1979, optimism still did not plunge to the low ebbs reached in 1970 and in 1974-75.

In regard to sales, the sag in confidence began in the previous survey and accelerated in the current one. On the other hand, the outlook on profits had held relatively firm a quarter earlier but sank sharply in the latest survey. Meantime, the business leaders did not change their sights appreciably on either inventories or employment.

The Sales Optimism Index (the percentage expecting increases minus the percentage expecting decreases) fell 13 points to 56 from 69 in the previous quarter and sank 23



points from the comparable fourth quarter a year ago. Manufacturers of durable goods showed the greatest loss of optimism, 15 points from the preceding survey, and manufacturers of non-durable goods the least, 7 points. Over-all, the business executives remained more confident than in 1975's final quarter when the index sank to 48. But, retailers were even less cheerful than they had been in that depressed period.

When asked to predict the trend in new orders for the wind-up quarter of 1979, some 57 per cent looked for an increase as against 67 per cent a quarter earlier and 75 per cent a year earlier. In fact, it was the gloomiest view on bookings since the third quarter of 1975. Furthermore, there was a close consensus between durable goods makers and non-durable goods makers on this point.

The outlook of the business executives about the bottom line dimmed abruptly after maintaining quite a rosy glow in the previous survey. The Profits Optimism Index plunged 21 points to 40 and, like the reading on sales, hit the lowest level in four years. Retailers' ebullience about profits faded most, waning 23 points.

Expectations of inventory build-ups changed very little, with 52 per cent anticipating a rise, virtually the same proportion as in the first and third quarters this year and not far below the 56 per cent in the corresponding quarter last year. However, a slight tendency appeared for a shift from foreseeing a steady inventory level to foreseeing a curtailment. Among retailers, 19 per cent predicted a cutback in stocks as against 11 per cent in the previous survey.

On payroll rosters, the executives held close to their previous projections in the latest round of interviews. Twenty per cent expected an increase in employees, just 2 points under the proportion in the third quarter. Steadiness prevailed in all categories except wholesaling where the number expecting to add to payrolls shrank to 14 per cent, the least since '75. As usual, durable goods manufacturers were the most optimistic as 27 per cent looked for an increase in employees.

For the first time since the start of the year, the number of business leaders anticipating price hikes diminished a notch, from 82 to 80 per cent.

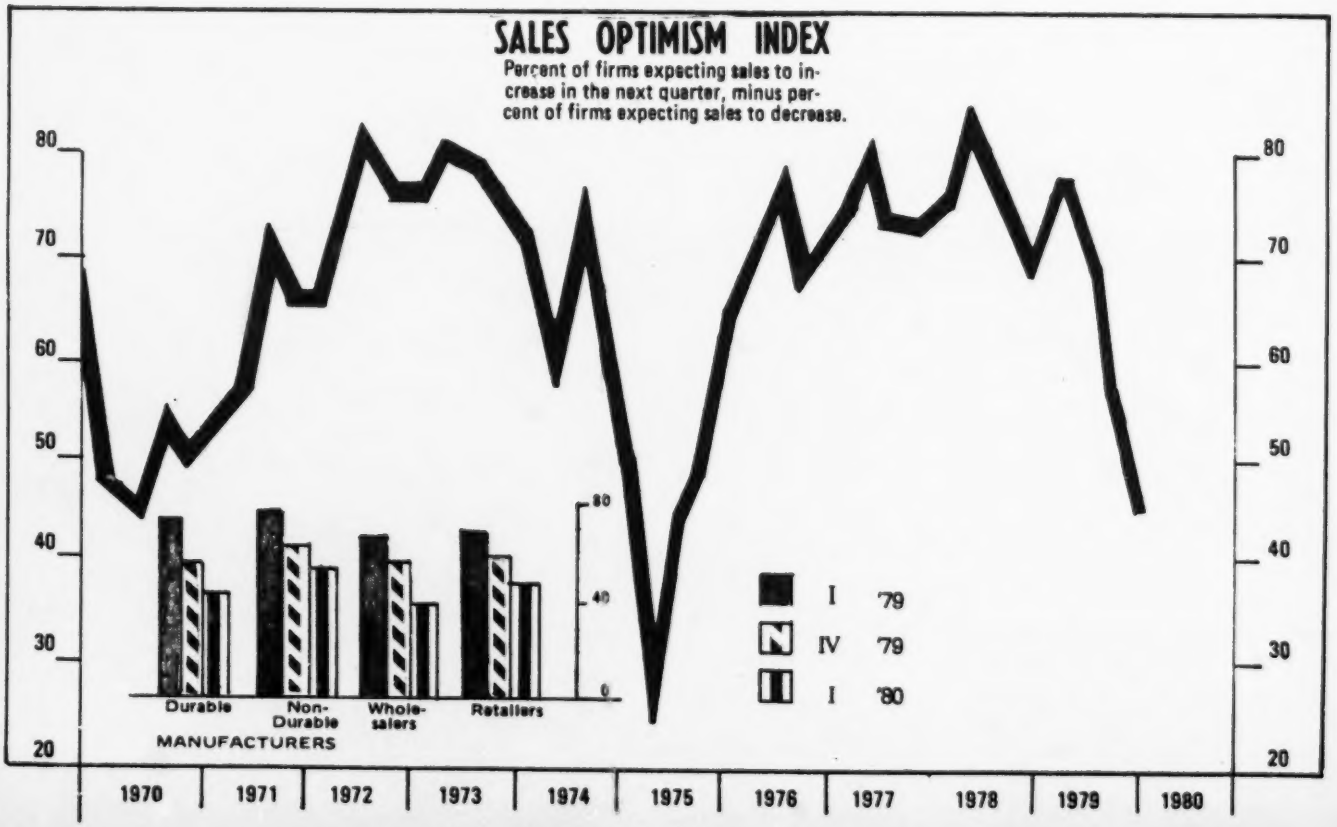
BUSINESS OPTIMISM CONTINUES TO SAG BUT DOES NOT FALL TO '75 DEPTH

RECEIVED
JAN 31 1980

NEW YORK, January 28--Although ebbing for the third straight quarter, business optimism still remained at a considerably cheerier level than in 1975, according to the latest Dun & Bradstreet Survey of Business Expectations. The 1,382 executives interviewed about their outlook for the initial quarter of 1980 lowered their sights on sales and profits but did not shift materially their views on employment and prices.

The Sales Optimism Index (the percentage expecting increases minus the percentage expecting decreases) dropped 12 points to 44, the lowest reading since the second quarter of 1975 when the index plummeted to 24. This decline to a five-year low prevailed across the board--in manufacturing, wholesaling and retailing. But the degree to which confidence waned between the fourth quarter of 1979 survey and the first quarter 1980 survey varied,



reflecting different reactions to what has been termed one of the longest slowdowns yet one of the mildest recessions in our economy to date. Wholesalers' optimism sagged the most, 17 points to 39, whereas manufacturers of non-durable goods showed the smallest dip, a six-point easing to 55.

Hopefulness about the bottom line did not erode as much as about sales. The Profits Optimism Index was down 8 points to 32 but still doubled its reading of 16 in the second quarter of 1975. Again, wholesalers showed the gloomiest turn. Executives in non-durable goods manufacturing held firm to their predictions in the previous round of interviews and retailers lowered their sights only slightly.

No doubt the greater optimism of non-durable goods manufacturers than of those in durable goods industries stemmed from the fact that only 8 per cent expected a decrease in new orders as against 20 per cent of the durable goods makers.

A cautious attitude about inventory accumulation prevailed generally. The percentage of executives foreseeing an increase in stocks eased to 43 per cent, the smallest portion in two years while the percentage anticipating a cutback rose to 20 per cent, the most in four years. Contrary to this trend, an edge more non-durable goods manufacturers looked for an increase in inventories, 49 per cent vs. 47 per cent in the preceding survey and fewer looked for curtailment, 12 per cent vs. 16 per cent.

Nearly three-fourths of the business leaders interviewed anticipated no change in employee rosters. This over-all figure has held steady for five consecutive quarters. Expectations of adding to payrolls were less frequent, at 18 per cent, than in the first quarter a year ago when 23 per cent held this view, with the most noticeable downturn among retailers and durable goods manufacturers.

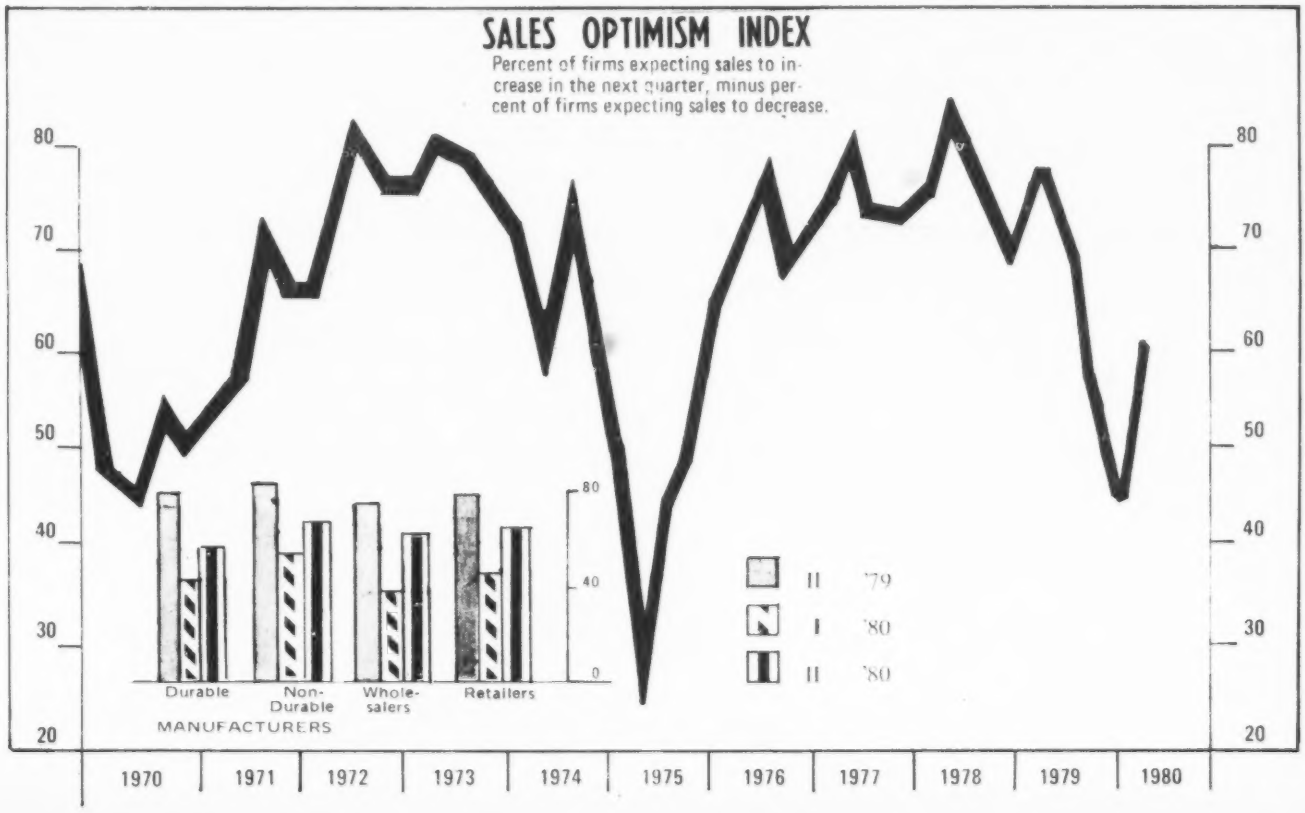
BUSINESS OPTIMISM PERKS UP IN LATEST D&B EXPECTATIONS SURVEY

NEW YORK, April 17--Business optimism has perked up considerably from the sag begun midway in 1979, according to the latest Dun & Bradstreet Survey of Business Expectations. Among the 1,499 executives interviewed about prospects for 1980's second quarter, strengthening confidence was noted in regard to sales, new orders and profits. However, their views on inventories and prices dimmed.

The Sales Optimism Index (the percentage expecting increases minus the percentage expecting decreases) climbed 17 points to 61 but did not recover to the 69 registered in the third quarter of 1979. Wholesalers showed the greatest growth in confidence from the preceding survey, a jump of 21 points. While manufacturers of non-durable goods were by far the most cheerful about sales a quarter earlier, this time retailers and wholesalers registered indexes of 62 and 61, pulling close to the 66 for the non-durable goods makers.



Executives in durable goods industries, on the other hand, despite a brightening of their predictions about sales prospects by some 14 points, still lagged 23 points under the degree of optimism registered a year ago.

Confidence lifted also about the bottom line, with the Profits Optimism Index moving up 14 points to 46. Wholesalers and retailers sparked this rise although executives across the board raised their sights on profits.

Three out of five manufacturers looked for an acceleration in new orders. This compared with one out of two in the preceding survey. While durable goods makers, to the tune of 61 per cent, were more hopeful about bookings, still 14 per cent of them predicted a decrease in contrast to only 3 per cent of the non-durable goods manufacturers.

The outlook of the executives interviewed worsened in regard to inventories. Slightly more than half expected a build-up of inventories vs. 43 per cent in the survey a quarter earlier. This increase was largely confined to wholesalers and retailers. Actually, there was little shift over-all from the opinions voiced in the corresponding 1979 survey. Whereas fewer manufacturers anticipated heavier stocks, they were counterbalanced by more wholesalers and retailers foreseeing a growth in inventories.

Expectations about employment improved slightly. The proportion of those polled who predicted no change in rosters remained at 73 per cent for the sixth straight quarter. But, more of the executives, particularly in retailing, anticipated additions to their payrolls, and fewer, notably in durable goods manufacturing, anticipated a cut in rosters.

Further price increases were predicted by 82 per cent of the survey participants, the most since the latter half of 1974. The proportion looking for higher price tags ranged from 89 per cent of the retailers down to 80 per cent of the durable goods manufacturers.

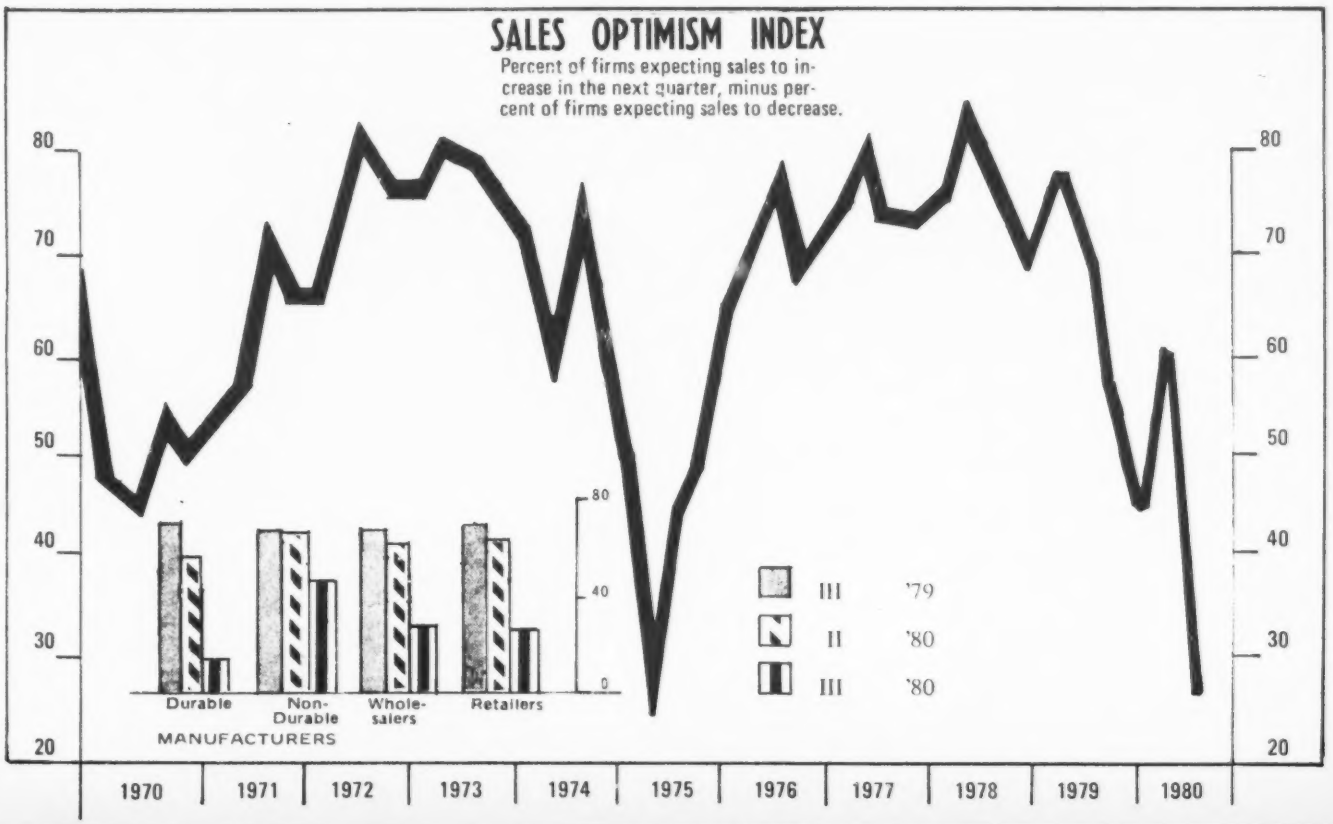
BUSINESS OPTIMISM SINKS LOWEST SINCE '75
BUT NOT AS GLOOMY AS '58 ACCORDING TO D&B SURVEY

NEW YORK, July 16--Business optimism about sales and profits, tumbled to the lowest level since 1975 according to Dun & Bradstreet's latest Survey of Business Expectations. Some 1,429 executives were interviewed about their outlook for the third quarter of 1980. Clearly, the renewed confidence shown in the preceding survey was short-lived. While the views of the business leaders about sales prospects were gloomier than in 1961, they were not as dismal as in earlier recessions such as 1958, 1954, and 1949.

The Sales Optimism Index (the percentage expecting increases minus the percentage expecting decreases) plunged 35 points to 26 for the third quarter from the reading of 61 in the second quarter. This was its lowest ebb since the second quarter of 1975 when it stood at 24. Among manufacturers of durable goods, optimism dropped most severely, 45 points to 11, the dimmest level since the 6 reached in the second quarter of 1958. In



contrast, manufacturers of non-durable goods showed the least moderation in confidence, down to 47 from 66.

A somewhat milder sag prevailed in regard to profits as the Profits Optimism Index fell 28 points to 18 but held an edge above the 16 registered in 1975. Again, the executives in durable goods industries showed the greatest loss of confidence, their reading of 9 was only one-half the 18 for wholesalers and retailers and approximately one-fourth of the index of 35 registered for makers of non-durable goods.

Forty-two per cent of the manufacturers anticipated an increase in new orders, down from 60 per cent in the preceding quarter but not far below the 49 per cent in the initial quarter of 1980. While predictions about bookings did not vary appreciably from comparable periods in 1975 and 1961, they were slightly more hopeful than in the middle quarters of 1958 when only 36 to 38 per cent looked for a rise in orders. Over twice as many executives in durable goods as in non-durables expected bookings to dwindle, 35 per cent vs. 15 per cent.

Involuntary accumulation of inventories does not appear to loom in the projections of the executives interviewed. The percentage expecting a build-up in stocks was down to 35 per cent from 52 per cent in the previous survey. Among manufacturers of durable goods, those foreseeing a decline in inventories exceeded those foreseeing a rise, 37 per cent as against 29 per cent. This was a marked contrast to the situation in non-durable goods industries where 43 per cent predicted an increase and 18 per cent a decrease. As for retail and wholesale executives, over one-third anticipated inventory growth and slightly over one-fourth anticipated lower stocks.

On employment, as on sales and profits, optimism dimmed the most since '75. Only 14 per cent of the business leaders interviewed expected to add to payrolls, the fewest since the second quarter of 1975 when 13 per cent held this view. Furthermore, there was a close consensus among manufacturers, wholesalers and retailers about adding to employee rosters, 15 per cent in both manufacturing categories, 16 per cent in retailing, and 11 per cent in wholesaling. Not surprisingly, with the slump in the automotive and housing

industries spreading to other consumer hard goods, the percentage of durable goods makers expecting to cut back on employees jumped sharply to 27 per cent in the third quarter from 7 per cent a quarter earlier and the highest since 1949-50.

For the first time in over two years, the business executives moderated appreciably their sights on prices. Whereas 84 per cent had looked for an upward spiral in the second quarter, the proportion shrank to 73 per cent in regard to third quarter price tags, the smallest number since the first quarter of 1978. Most of the shift in opinion was from predictions of an increase to predictions of no change. However, the portion of durable goods makers anticipating a decrease in prices grew to 5 per cent, the most since 1975, but remained short of the 8 per cent in second quarter of 1958.

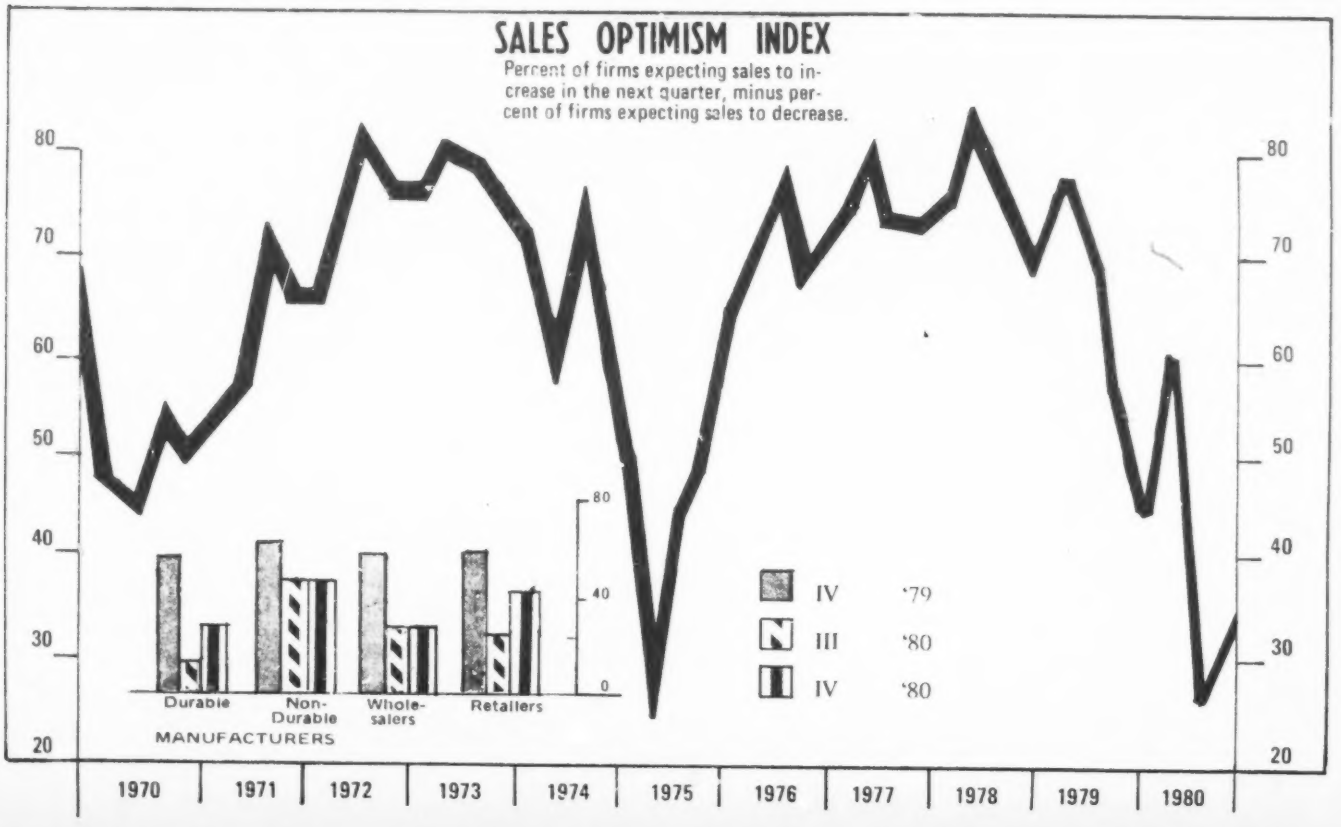
BUSINESS OPTIMISM RECOVERS SLIGHTLY IN LATEST D&B SURVEY

NEW YORK, October 23--Taking a turn for the better, business optimism recovered slightly from a five-year low in the latest Dun & Bradstreet Survey of Business Expectations. But, the modest size of the improvement indicates that upward progress may be sluggish. Among the 1,429 interviewed about their appraisal of fourth quarter 1980 prospects, confidence about sales perked up appreciably more than about profits. There was little change in the outlook of these leaders regarding inventories and employment.

The Sales Optimism Index (the percentage expecting increases minus the percentage expecting decreases) rose 8 points to 34 after sinking to 26 in the preceding survey. Still, the index lagged 22 points short of the year-ago reading of 56 in the comparable quarter. The brightening outlook was concentrated among durable goods manufacturers, up to an index of 26 from a dismal 11 a quarter earlier, and among retailers where there was



a rebound to 42 from 27.

As third quarter profits dropped sharply, led by the automotive industry, and inflationary costs persisted, the Profits Optimism Index nudged up only 4 points to 22 from 18, which was little more than one-half the reading of 40 in the comparable quarter last year. Again, on the bottom line as well as on sales, makers of durable goods and retailers accounted primarily for the slightly cheerier note. In contrast, the Profits Optimism Index for non-durable goods manufacturers faded to 29, the lowest ebb since the second quarter of 1975.

Some 46 per cent of the leaders in manufacturing anticipated a rise in new orders, bettering slightly the 42 per cent in the previous survey. Yet, this percentage remained the second lowest since '75. Contrasting trends prevailed in the two segments of manufacturing as a rising portion of durable goods makers looked for a step-up in orders but a diminishing number of non-durable goods makers expressed that view.

On inventory levels, the executives interviewed held firm to expectations voiced in the preceding survey, with 36 per cent predicting an increase and 39 per cent no change. Manufacturers in non-durable goods industries were most likely to predict heavier stocks, 44 per cent in all and wholesalers the least likely, at 33 per cent. In all categories except non-durable goods manufacturing, considerably fewer anticipated a build-up in inventories than at the same time a year ago.

Despite reports of a rise in employment in the third quarter, the executives questioned about fourth quarter employee rosters did not shift their sights from projections in the previous quarter. Some 16 per cent expected to add to payrolls vs. 14 per cent, and 69 per cent expected no change vs. 68 per cent. The only noteworthy brightening of employment prospects occurred among manufacturers of durable goods--the percentage expecting to pare rosters shrank to 19 from 27 per cent in the third quarter.

Higher price tags were anticipated by 77 per cent of the respondents, an edge above the 73 per cent in the previous round of interviews but still below the 84 per cent in the second quarter of 1980. As in all quarters this year, durable goods manufacturers had the smallest proportions foreseeing a hike in their prices.

###

3. BUSINESS EXPECTATIONS

SURVEY OF BUSINESS EXPECTATIONS
Conducted by Dun & Bradstreet

WHAT BUSINESS EXECUTIVES EXPECT FOR THE
FOURTH QUARTER OF 1980 COMPARED WITH THE FOURTH QUARTER OF 1979

(Interview Period: August 6-20, 1980)

			All Concerns	Total Manufacturers	Manufacturers Durables	Manufacturers Non-Durables	Wholesalers	Retailers
	Number Reporting		1429	715	475	240	428	286
Net Sales	Per Cent Reporting	(Increase	55	55	51	63	52	58
		(No Change	24	23	24	21	25	26
		(Decrease	21	22	25	16	23	16
	Number Reporting		1397	697	458	239	420	280
Net Profits	Per Cent Reporting	(Increase	45	46	45	49	42	46
		(No Change	32	28	26	31	36	34
		(Decrease	23	26	29	20	22	20
	Number Reporting		1424	711	468	243	429	284
Selling Prices	Per Cent Reporting	(Increase	77	74	71	79	79	80
		(No Change	20	23	26	18	17	19
		(Decrease	3	3	3	3	4	1
	Number Reporting		1417	708	467	241	426	283
Level of Inventories*	Per Cent Reporting	(Increase	36	38	34	44	33	38
		(No Change	39	36	38	33	44	39
		(Decrease	25	26	28	23	23	23
	Number Reporting		1419	707	466	241	427	285
